ABOUT ME

I am a java Developer with 2 years of experience. I am responsible for designing, writing clean and reusable code, performing tests and deploying code to server. For me learning is always a great thing, mostly my experience includes working in a small team who handles all the project responsibilities. I'm truly passionate about my work and always learn the upcoming features in this field.

BACKEND

Full stack developer

April 2017 - Present Rasa marketing pvt. ltd.

Its a chennal based company operating in retail and other sectors. They recently started IT operations in Mumbal in 2016.

Java developer

2016 - 2017

Davos Finservices pvt. ltd., Mumbai

This is mutual fund distribution company where IT department is responsible for handling user registration and transaction of customers coming to the website.

Trainee technology

2013

Uniken Systems, Pune

Company is mainly in the development of its REL-ID product which is biometric authentication system. Also there are other projects available from other clients.

AirIT - messaging application - I am responsible for full stack web development of airit where users can login and use messaging app on website. Also I am part of team for backend server api development. Technologies: spring mvc, consuming rest api and json parsing, maven, html5, css, jquery, ajax etc.

Robobanking - KYC registration of users. facebook graph API integration for getting lead information of Facebook ads posted; just at the click of a button. persistent authentication/remember me functionality, Creating responsive web UI, basic android app using full screen web view development and deployment on play store.

JAVA Project: Anti Piracy software for mp3 files in windows platform: - A J2EE web application where downloaded mp3 files plays only on one machine. It plays through the designed player only. If it is transferred to another machine along with designed player then also it cannot be played. Here functionalities of jlayer are used in the project. WMI scripts are used to get processor and disk IDs.

Dabewala - Technologies used: php, mysql, jquery, ajax, angular js, css3, html5. I have created dabewala.com website and android app

'dabewala' hosted on play store. Features: sellers and customers can register and login to the site. Sellers can customize menu, view orders and view reviews. Customers can place order, cancel order, submit seller review and rating.

Behavioral retargeting marketing of e-commerce web sites. - Using JavaScript programming, we have to store users purchase pattern. During This project I implemented a java program to generate JavaScript code from given input of Xpath of HTML DOM object. This tool was useful in our project.
